M.S. Computer Science

Kadir Has University

B.S. Industrial Engineering

Kadir Has University

PROFILE

Senior engineer with **6+ years** shipping production apps across **fintech, mobility, e-commerce, telecom and health-tech**, now founding and running my own products end to end. Expert in modern Android and **Kotlin Multiplatform** — Jetpack Compose, Coroutines/Flow, Hilt/Koin, and Compose Multiplatform shipping native Android *and* iOS from one codebase — and equally at home owning **Go / PostgreSQL** backends, Next.js web and the Cloudflare / Hetzner infrastructure behind them. Since 2026 I build **applied-AI features that run in production** — Claude vision pipelines with tiered model routing, batch inference and quota/caching guardrails, on-device ML (ML Kit, Apple Vision, TensorFlow.js), LLM content and moderation systems — and I work **AI-natively**, pairing with Claude Code under contract-style project docs in every repo.

EXPERIENCE

Founder & Full-Stack Engineer · Exifora

2026 – Present · Istanbul · remote

- Built and launched **Exifora** solo (App Store, Google Play, AppGallery): Go modular monolith, Next.js 16 web, Compose Multiplatform mobile — **1,300+ API routes, 700+ migrations, 170+ screens, 10 locales, 7 payment providers**. Also ship **Abonman** (KMP + Go) and **ARC** (KMP + Supabase), below.
- Designed the **applied-AI layer on Claude** (Anthropic Go SDK): 25 vision/text capabilities behind 17 endpoints, **three-tier model routing** (Opus for quality, Haiku for volume), **Message Batches** for bulk critique at half cost, per-tier daily quotas, caching, zero-cost degradation when unconfigured.
- Own production: Hetzner VPS + PostgreSQL 16 with **WAL-G continuous archiving** to R2 (RPO 60 s / RTO 2 h runbook), Cloudflare CDN/WAF, Vercel, coturn TURN, New Relic, Sentry, Crashlytics; tag-driven CI/CD on GitHub Actions (Android → Play + AppGallery) and Codemagic (iOS → TestFlight).
- AI-native delivery**: ~1,700 commits in 3.5 months, 97% paired with Claude Code under a 1,000-line CLAUDE.md contract plus 18 domain decision-record docs; LLM-driven SAST across 14 vulnerability classes; custom lint/codegen toolchain (web i18n → Kotlin catalogs).

Kotlin · Compose Multiplatform · Go · PostgreSQL · Next.js · Claude API · Supabase · Cloudflare

Senior Android Developer · Sothis Partners

Dec 2023 – Feb 2026 · Turkey

- Led development of **Icrypex**, a Turkish crypto-exchange app, building the entire client **from scratch** with Kotlin, Jetpack Compose, Hilt, Coroutines/Flow, MVVM and Room.
- Engineered **real-time market data** and complex financial UI — interactive price charts, order books and live tickers — over streaming/WebSocket data.
- Owned architecture and performance for data-intensive trading screens, keeping the UI smooth under continuous high-frequency updates.

Kotlin · Jetpack Compose · Hilt · Coroutines/Flow · MVVM · Room · WebSocket

Senior Android Developer · Cue Health

May 2023 – Dec 2023 · USA (remote)

- Delivered features for Cue Health's US consumer **health-tech** app in a regulated environment, working with a distributed US team.
- Built Compose UI backed by Koin, Coroutines/Flow and MVVM with a focus on reliability and testability.

Kotlin · Jetpack Compose · Koin · Coroutines/Flow · MVVM

Android Developer · BiTaksi

Oct 2021 – May 2023 · Turkey

- Built and shipped features for the **BiTaksi Driver** real-time ride-hailing app, handling live location and trip-state flows.
- Modernised the codebase, migrating reactive logic from RxJava toward Coroutines/Flow within an MVVM architecture.

Kotlin · Hilt/Dagger 2 · RxJava · Coroutines/Flow · MVVM

Android Developer · Migros

Jun 2021 – Oct 2021 · Turkey

- Improved three high-traffic **e-commerce** apps — Migros Sanal Market, MacroCenter and TazeDirekt — serving a large national user base.

Kotlin · Java · Hilt/Dagger 2 · RxJava · Coroutines/Flow · MVVM

Android Developer · Huawei

Apr 2020 – Jun 2021 · Turkey

- Developed features for **Huawei Assistant (Today)**, shipped globally on Huawei devices, integrating deeply with **HMS** services.

Java · HMS · Dagger 2 · Room

Software Support Intern · P.I. Works

Oct 2019 – Apr 2020 · Turkey

- Supported telecom network-management software; first hands-on exposure to production engineering.

HIGHLIGHTS

1 codebase → Android + iOS

Live on App Store · Play · AppGallery

Claude vision in production

Batch inference · tiered models

On-device ML · ML Kit / Vision

Production infra & DR owner

WebRTC calls · TURN

7 payment providers · 3-D Secure

Passkeys · 2FA · attestation

10-locales i18n

EXIFORA AT A GLANCE

Vision prompting · EXIF grounding

Quota · caching · guardrails

OpenAI Whisper

ML Kit · Apple Vision

TensorFlow.js · nsfwjs

Claude Code · agent workflows

WHAT I VALUE

Ownership

Schema to pixel to on-call.

Pragmatism

Right-sized architecture; AI where it pays for itself.

SELECTED PROJECTS

Exifora

FLAGSHIP

Founder & Solo Full-Stack Engineer · 2026 – Present

exifora.com · App Store · Google Play · Huawei AppGallery · Compose Multiplatform + Go + Next.js 16

- ◆ A production **photography-contest platform**: jury judging engine, clubs and challenges, a daily-theme retention loop, a 30+ module **Academy**, virtual exhibitions, live-GPS meetups and **in-app WebRTC calls** (CallKit, ReplayKit screen share, coturn) — on Android, iOS, web, Wear OS and iOS Live Activities from shared code.
- ◆ **Applied AI on Claude vision**: AI Photo Coach, pre-submission contest check (theme fit + technical scores), jury-style title generator, sun-aware shooting planner, Academy homework grading grounded in EXIF, Photo-of-the-Week commentary in 10 locales, archive triage & clustering, RSS/YouTube → editorial blog drafts with paced publishing, press releases, vision moderation gate.
- ◆ **Prompt & cost engineering**: persona-based jury prompts, "describe only what is unmistakably visible" hallucination guards, server-side image fetch + 1568 px thumbnails for vision limits, 72 h presigned URLs for async batches, once-per-frame caching, subscription-tier quotas, GA4-instrumented.
- ◆ **Other ML**: on-device ML Kit / Apple Vision labeler for off-topic upload hints (KMP expect/actual), browser NSFW gate (nsfwjs + TF.js, two-threshold, fail-open), dHash near-duplicate detection, speech-to-text with Whisper fallback, 10-locales machine-translation pipeline with repair backfill.
- ◆ **Trust & security**: JWT + refresh, TOTP 2FA, WebAuthn passkeys, Google/Apple OAuth, Turnstile, device attestation (Play Integrity, HMS SafetyDetect, App Attest), SSRF-safe outbound client, rate limiting; 7 payment providers incl. direct virtual POS + 3-D Secure.

ARC — Anatolian Rover Challenge

Competition management system · 2026

Compose Multiplatform (Android + iOS) · CMP Web/Wasm admin & jury cockpit · Supabase (Postgres, Auth, Storage, RLS) · Deno edge functions

- ◆ End-to-end flow for a university rover competition (ARC'26): account → team → application → stages → deliverables → jury scoring → field day; iyzico hosted checkout, graded refunds, KVKK consent model with audit and purge.
- ◆ **Business rules live in the database**: 35 SQL functions, 57 RLS policies, column-level grants, SQL tests; a FakeBackend mirrors the rule codes and a lint diffs SQL error codes against Kotlin constants so client and server never drift.

Abonman

Founder & Full-Stack Engineer · 2026 – Present

Google Play · Compose Multiplatform (Android + iOS) · Go (Gin) · sqlc · PostgreSQL 17 · FCM · Resend

- ◆ Subscription tracker with renewal push reminders, spending analytics and live FX rates; MVI + Koin + Room app over a JWT-secured Go API with embedded migrations and cron.
- ◆ **Receipt / PDF import**: on-device OCR (ML Kit, Apple Vision) feeding an offline rule-based extractor with editable confirmation — no network calls, missing fields over wrong guesses.

Zin Gümüş

E-commerce storefront + admin · Aug 2026 (pre-launch)

Astro SSR on Cloudflare Workers · D1 · R2 · KV · Cron · iyzico 3-D Secure

- ◆ Zero-cost edge stack that works fully **without JavaScript**: integer-kuruş money, hourly TCMB + spot-metal price sync, client-side WebP pipeline (OffscreenCanvas) to respect the 10 ms CPU budget, 26 migrations, 80+ routes.

HOW I BUILD WITH AI

- ◆ **Product-first AI**: every model call sits behind tier, quota and cache, degrades to zero cost when unconfigured, and ships with analytics — an AI feature is "done" the same way any feature is.
- ◆ **Cost/quality routing**: Opus where output is public or high-stakes, Haiku for volume, Batches for bulk; prompts grounded in EXIF and context with explicit anti-hallucination rules.
- ◆ **AI-native workflow**: Claude Code as daily driver under contract-style CLAUDE.md docs; LLM-assisted security and code review; conventions enforced by scripts, not prose.
- ◆ **Quality is not optional**: 340+ Go tests, SQL-level tests for database rules, lint scripts that fail the build on drift, tag-driven releases to three stores, and a documented disaster-recovery runbook (RPO 60 s / RTO 2 h).
